

## Spring into Energy Savings – Tips for the Season Ahead

As the warmer weather and longer days greet us, it's the perfect time to adopt energy-saving practices for a cost-effective and sustainable spring.

- Embrace natural light by **opening curtains and blinds during the day**, reducing the need for artificial lighting and giving your HVAC system a well-deserved break
- Combat phantom energy drain by **unplugging electronics when not in use**, or invest in an advanced power strip to easily cut off power to multiple devices at once
- Schedule a **spring HVAC tune-up** to ensure your system is operating efficiently. Clean or replace air filters regularly to maintain optimal airflow
