

# Spring into savings by weatherizing your home.

Weatherization is the process of making your home better protected against the effects of changing weather and can include:

- Sealing air leaks
- Adding insulation
- Sealing ductwork

As a result, you'll notice:

- Heating and cooling systems work less to keep your home at the desired temperature
- You're more comfortable thanks to less drafts
- A cleaner home as allergens, like dust and pollen, are kept out
- Reduced energy bills during the heating and cooling seasons

Leave weatherization to the professionals. We can help you with Home Energy Solutions<sup>SM</sup>. Home Energy Solutions is available to eligible customers and includes air sealing and duct sealing, if applicable. If insulation is recommended, a rebate is available.

Income-eligible customers receive the initial visit at no-cost and may receive additional services at little to no cost.

## Other energy efficiency tips:

- When the weather is warmer, consider hanging your clothes outside to let them dry
- Turn down the thermostat and open your curtains to let the sun naturally heat your home on cool, sunny days
- On warmer spring days, fire up the grill and cook outside instead of using your stove top or oven
- Lower your water heater's temperature by adjusting the dial. Setting it at a maximum of 120 degrees saves money and provides comfortable water out of your faucets
