

New construction incentives are available

If you're building a new home, consider integrating energy efficiency into your plans.

Energy-efficient homes include features to maximize comfort, indoor air quality, and convenience while minimizing maintenance, energy use, and greenhouse gas emissions.

Eversource offers incentives up to \$10,000, as well as technical assistance to support builders, developers, and homeowners in the construction of energy-efficient homes including multi-family projects.

Visit eversource.com/new-construction or speak with your builder to learn more.

Energy efficiency tips for spring

Spring is finally here, and Eversource is committed to providing solutions that help lower energy use and improve comfort. Implement any of the below tips to start reaping the benefits today:

- On sunny spring days, keep curtains and shades on south-facing windows open to allow the sunlight to enter and warm the home, and closed at night to reduce the chill from cold windows
- Instead of using a clothes dryer, hang wet laundry outside on a line to dry. If that is not an option, consider using an ENERGY STAR® certified clothes dryer
- On warmer spring days, fire up the grill and cook dinner outside instead of using your stove top or oven
- Lower your water heater's temperature by adjusting the dial. Set it at a maximum of 120 degrees to lower energy use without sacrificing comfort
