

Save with a heat pump water heater

If you're looking for a new water heater, consider an energy-efficient heat pump water heater.

By taking advantage of heat in the surrounding air, they provide a steady flow of hot water but use 50% less energy than standard electric storage water heaters, saving you up to \$530 each year.

Plus, you can save when you shop—receive an instant discount or rebate up to \$750 when you switch to an eligible heat pump water heater.

Interested in efficient heating? We have resources to help

If you're looking for an efficient way to stay comfortable this winter, consider an air or ground source heat pump.

Heat pumps are a clean, flexible home heating solution available for homes with or without ductwork. These clean energy systems can support your entire home, specific rooms, or a new addition.

They also efficiently cool your home in the summer, all while lowering greenhouse gas emissions.

Kick back in a more comfortable home with a heat pump and you may qualify for rebates up to \$15,000.
