

EVERSOURCE

October is Energy Awareness Month

Join the celebration by taking simple steps
to learn how energy is used in your home
and find ways you can save.

Become energy aware & save at home

We're committed to helping you better understand your energy use, making it easier to find ways to save.

This month, celebrate Energy Awareness Month by taking action:

- Login to your Eversource account to use our new interactive online tools for customized insight into how you use energy and where you can save.
- Replace your existing inefficient light bulbs with LED bulbs. According to the U.S. Department of Energy, LEDs typically use up to 80% less energy than incandescent bulbs.
- Prepare for the cooler months ahead. Install Wi-Fi enabled smart thermostats for an easier way to heat your home efficiently.
- When it's time for a new appliance, consider an ENERGY STAR® certified model--they exceed federal efficiency and quality standards.
- Most of a washing machine's energy is used to heat the water. Run your washing machine on cold to save.
- Use our Heating Cost Calculator to see how the cold winter months might impact your heating costs.
