

Summer ways to save

Follow these tips to keep cool for less this summer.

- Wash your laundry with cold water. According to the Department of Energy, this can cut each load of laundry's energy use by more than 50% when compared to washing with warm water
- Insulate your water heater. If your water heater is more than three years old, consider insulating it to save up to 16% in annual water heating costs
- Avoid using the stove and try some no-heat recipes such as fruit salad, wraps, and cheese boards. There are even no-bake dessert recipes like cheesecake

Enjoy the savings of efficient hot water

High efficiency, natural gas-fired water heaters save you money and energy while providing a steady stream of hot water.

Consider upgrading your current natural gas water heater to a high efficiency ENERGY STAR® certified model to reduce the amount of energy used for water-heating.

You may also be eligible for a rebate of \$300 if you make the switch to a qualifying high-efficiency natural gas on-demand or condensing storage water heater.
