

It's easier than you think to build an energy-efficient home.

Designing a new home with the latest energy-efficient technologies does a lot more than save energy. It gives you greater comfort, convenience, and a healthier indoor environment that add up to enhanced value.

Eversource's Residential New Construction program provides:

- Expert guidance from energy specialists – Home Energy Rating Systems (HERS) Raters – who help you tap into energy-efficient home certifications, high-efficiency equipment, high-performance building practices and the latest material options
- Based on your new home's final HERS index you may qualify for a rebate of up to \$7,000
- Build your home to Passive House, ENERGY STAR®, LEED for Homes, DOE Zero Energy Ready Home, or National Green Building Standard® requirements and you may qualify for an additional rebate

Feel the comfort of even, consistent heating and cooling.

If you're looking for an energy-efficient way to heat and cool your home, consider a heat pump. Heat pumps are environmentally friendly, affordable to operate, and can last longer than other heating and cooling systems.

Some heat pump benefits include:

- **Low-cost heating and cooling:** Compared to heating and cooling with other electric systems, heat pumps allow you to save money on energy bills
- **Comfort & Convenience:** Heat pumps provide all-in-one comfort since heating, cooling, and dehumidification are all in one system
- **Environmentally Friendly:** Heat pumps are extremely efficient and emit fewer greenhouse gases, which is better for the planet

To help you make the switch, Eversource is providing customers incentives up to \$15,000 per home for purchasing eligible heat pumps.
