Weatherize Your Home Now for More Than Just Summer Savings

Weatherizing your home in the summer is not just about staying cool – it is about enjoying year-round comfort and savings. Did you know that by weatherizing now, you can keep the benefits rolling into fall and winter? Take control of your comfort and savings by preparing your home for every season ahead. Through a no-cost Home Energy Assessment, you may receive recommendations for approved insulation upgrades at 75-100 percent off and no-cost air sealing. It is the ideal time to make your home more comfortable and energy efficient.

Here is why weatherizing your home is a smart move:

- Minimize drafts and lower energy costs. Proper insulation and air sealing keep your home cozy while reducing energy consumption
- Enjoy fresher air and better humidity control
- Reduce outside noise, minimize allergens, and keep pests at bay

Dive Into Savings with a Heat Pump Water Heater

Did you know that water heating is the second-largest energy expense in U.S. homes, accounting for about 18 percent of the average home's energy use[1]?

This summer, consider making a smart investment by upgrading to a heat pump water heater. Heat pump water heaters work by extracting heat from the air, making them up to three times more efficient than conventional electric water heaters and using about 70 percent less energy. This cutting-edge technology helps you save up to $1,050 per year on water heating costs[2].

Plus, receive up to $750 from Eversource for the purchase and installation of an eligible heat pump water heater. Your purchase may also be eligible for a federal tax credit of up to $2,000 through the 25C Energy Efficient Home Improvement Credit*.
