

Improve home comfort with a heat pump

If you're looking for an efficient way to stay comfortable, consider a heat pump.

Heat pumps are a clean, flexible home heating solution available for homes with or without ductwork.

Because they are up to 400% efficient, a heat pump can heat your home in the winter and cool your home in the summer, all while lowering greenhouse gas emissions.

Kick back in a more comfortable home with a heat pump and you may qualify for rebates up to \$15,000.

Visit eversource.com/heatpumps for more details.

Lower energy use with a heat pump water heater

If you're looking for a new water heater, consider an energy-efficient heat pump water heater.

By taking advantage of heat in the surrounding air, they provide a steady flow of hot water but use 50% less energy than standard electric storage water heaters, saving you up to \$725 each year.

Plus, you can save when you shop—eligible customers can receive a \$750 instant discount on the purchase of a qualifying model.
