

Eversource's Basic Service Rate Effective Jan. 1, 2023

Many Americans are coping with increasing prices, including rising energy bills.

Right now, record high natural gas prices are having the biggest impact on bills, especially here in New England where natural gas is used to generate much of the region's electricity for homes and businesses.

We know you count on us every day for the energy you need and recognize our role in keeping bills as low as possible, especially as energy prices surge.

Beginning Jan. 1, if you have chosen Eversource as your energy supplier, you'll see an increase in the Basic Service rate (energy supply) compared to December. How much you pay will depend on how much energy is used, and weather conditions during the heating season.

*While adjustments to **other rates took effect Jan. 1, 2023**, rising energy supply costs are the primary factor impacting customers' total monthly bills.*

What You Can Do to Lessen the Financial Impact of Rising Costs

- Take advantage of our **Heating Cost Calculator** to see how adjustments to your thermostat can help you save.
- Enroll in **Budget Billing** to help avoid seasonal spikes on your energy bill by letting you pay a fixed amount each month based on your average annual usage.
- **Compare rates** offered by other electric suppliers and choose the option that works best for you.
- Learn about **special programs** to lower your monthly payments, forgive past due balances or enable you to pay over time.
