

October is Energy Awareness Month and Eversource is here to connect you with solutions for savings

Weatherization is the process of making your home better protected against the effects of changing weather and can include:

- Sealing air leaks
- Adding insulation
- Sealing ductwork

As a result, you'll notice:

- Your heating system works less to keep your home at the desired temperature
- You're more comfortable thanks to less drafts
- A cleaner home as allergens, like dust and pollen, are kept out
- Reduced energy use

Let the professionals weatherize for you. Visit eversource-hea.com/start.

This Energy Awareness Month and on, incorporate the below tips to save.

- Use the sun to your advantage by opening curtains and blinds during the day and close them at night to reduce drafts
- Keep the fireplace damper closed. When the damper is open and there isn't a fire burning, warm air can escape through the chimney
- Don't heat space you don't use. Close the vents and shut the doors to infrequently used rooms and open them when you need them
- Replace your furnace filter every three months to reduce the demand for energy and improve the heating process
- Use locks on your windows to make them tighter and draft resistant
