

Energy-Saving Home Heating Options

Do cooler temperatures have you thinking about home heating expenses?

If you're looking to save money and energy on heating and cooling, consider a heat pump.

Heat pumps are environmentally friendly and affordable to operate. Plus, since they work with or without ductwork, they can support your entire home, specific rooms in your home, or a new addition.

Not to mention they can provide cooling during the warmer months.

To learn more, including how to access rebates up to \$15,000 on qualifying heat pump systems, visit MassSave.com/heatpump.

Recycling is not just for bottles and cans

Are you running an extra, inefficient refrigerator or freezer in your home?

Recycle your inefficient appliance and you can gain some unexpected benefits for your home, including:

- Energy savings: Save \$125 or more in annual energy costs
- A \$75 rebate: Receive a rebate for recycling your qualified inefficient appliance
- No-cost pickup: Your appliance will be picked up and recycled at no cost to you
- Planet-friendly, responsible recycling: Up to 95% of the appliance's pieces will be recycled

To see if you qualify and to schedule your pickup, visit

eversource.com/appliance-recycling
or call 888-997-8892.
