Your Source for Energy Efficiency

Warm up to a heat pump

Up to \$2,000 in rebates for heating and water heating

Even when it's cold out, there's heat in the air. A heat pump can pull warm air in from outside and pump it into your home, saving you money and energy.

Plus, heat pumps can work with or without ducts, which makes them a good solution to heat your whole home or an expansion.

Heat pumps can also use the surrounding air to heat water. A heat pump water heater heats water efficiently and dehumidifies the surrounding air.
