

5 tips to help you save money and energy this winter

We're here with ways to help your home run on less.

- Dry two or more loads of laundry in a row to take advantage of extra heat in the dryer. If your dryer has a cool down function, use that for your final load.
- Plug electronics into advanced power strips. Some models turn off electronic devices when they sense no one is using them.
- Save energy by showering. It takes 35 to 50 gallons of water to fill a bathtub versus 25 gallons used during a 10-minute shower.
- When it's time for a new television or computer, look for the ENERGY STAR® label. ENERGY STAR certified products typically use about 50% less electricity than standard products.
- If you use electric heat, visit our Heating Cost Calculator at eversource.com/heating-calculator to help you determine the best thermostat setting to keep costs down while staying comfortable.
