

Eversource Electric Service Process and Responsibilities Guide

New Hampshire

EVERSOURCE

Streamlined six step process – These sequential steps expedite your request for new electric service.

1 CUSTOMER – Request electric service:

To request service, please contact the Eversource Electric Service Support Center (ESSC) by phone, email or on the web. Once a work request has been initiated, an automated email will be sent to verify the request and the customer's information.

2 EVERSOURCE – Assign to designer, design project, and determine customer cost:

At this stage, your request has been assigned to an Eversource designer. We will contact the designated point person for the project within two business days. If a field visit is required, your designer will work with you to schedule a time to meet at your job location. After the meeting, the project will be designed within our work management system.

3 CUSTOMER – Submit payment (if applicable):

When the design is finalized, we will send you a letter outlining the cost. The job can only be scheduled after payment has been received and all customer requirements have been met.

Please note: An additional meter connection charge will apply for each new meter that is installed. This charge will appear in your first monthly electric bill.

4 CUSTOMER – Complete trenching and conduit installation (if applicable):

For underground services, the customer is responsible for trenching and installing conduit in accordance with the Eversource *Information and Requirements for Electric Supply* book. Your Eversource designer will work closely with you to ensure that all requirements are met.

5 CUSTOMER – Secure an easement and obtain municipal inspection (if applicable):

If the designer determines an easement is required, we will provide detailed instructions regarding what will be needed to obtain the easement. We will also provide you with a helpful easement brochure, which includes a *Service Easement Application*. Please complete and return this application along with any other required documentation as soon as possible. Please note that the process to secure an easement may take up to eight weeks. After your electric service equipment has been installed, your electrician is required to contact the city or town electrical inspector to schedule an inspection. When your electric service equipment passes inspection, the inspector will contact Eversource with their approval. For everyone's safety the service can only be energized after we receive the inspector's official approval.

6 EVERSOURCE – Schedule work request completion:

When all customer requirements have been met and we have completed our final inspection, your work request will be scheduled for completion. Inclement weather or other unforeseen circumstances may delay the project completion in the projected time frame. Services requiring multiple meters or meters over 200 amps will be forwarded to the meter department, and may take an additional three business days to complete.

We offer the following convenient payment options:

Credit card, debit card or ACH (e-check)

(convenience fee applies)
