

YANKEE GAS SERVICES COMPANY, DBA EVERSOURCE ENERGY

PEAKING SERVICE

RIDER PK
Page 1 of 1

AVAILABILITY: Peaking Service is a firm service available to TRS Operators as outlined in Rate TRS on a pool-specific basis, provided the Company's facilities and gas supply are adequate, in its opinion, to render the required service. This service shall only be available to Operators that have firm customer pools.

Operators receive service under this Rider for the purpose of using the Company's peaking contracts and peaking facilities to meet winter season customer requirements. The Company will act as agent for the Operator under this Rider to provide natural gas peaking services. The Operator will have the right to nominate peaking service under this Rider during the heating season (November through March).

The Company reserves its rights to terminate service under this Rider to ensure the integrity of its distribution system and continuous service to its firm customers.

MONTHLY RATE:

Peaking Reservation Charge: Equal to the rate per Ccf of the revenue requirement of the Company's LNG peaking facility multiplied by the Operator's MPQ. Such revenue requirement is to be established at the time of a full rate proceeding for the Company. The Peaking Reservation Charge shall then be in effect until the next full rate proceeding.

Commodity Charge: Equal to the rate per Ccf of inventory in the Company's LNG peaking facility multiplied by the monthly nominated volume.

ELECTION: The Company will make available annually for service commencing on November 1st, a total available Maximum Peaking Quantity (MPQ) volume. During this open season, each Operator with a firm customer Pool will be informed of their MPQ volume, based on a percentage of its historical peak day load, not to exceed the Company's available MPQ volume, to remain in effect for a 12 month period. In the event that a material change to the composition of an Operator's pool occurs during any such 12 month period, the Company will inform the Operator of its new MPQ for the remainder of that 12 month period.

The Company will also designate a Maximum Daily Peaking Quantity (MDPQ) that will accompany each Operator's MPQ. The MDPQ will equal 1/11 of the MPQ.

MINIMUM MONTHLY CHARGE: The minimum monthly charge under this Rider is the Peaking Reservation Charge.

NOMINATION SCHEDULING: Nominations for this service will be done on a daily basis and will include the daily nominated volume, not to exceed the MDPQ, to be used each day. Nominations shall be made in accordance with the nomination procedures outlined in Rate TRS.

The Company will inform Operators of any withdrawal provisions that will accompany service under this Rider. These provisions will be communicated to Operators during the annual open season as outlined above. Such provisions may include, but not be limited to, monthly withdrawal limits and/or must turn provisions. Failure to adhere to these provisions may result in the imposition of an Operational Flow Order. The penalty rate for failure to adhere to an OFO issued under Rider PK is the same rate as a Failure to Deliver as defined in Rate TRS.

TERM OF SERVICE: Annual service will commence November 1st for a 12 month period ending October 31st.
